

COMPUTING

“Teaching in the Internet age means we must teach tomorrow’s skills today.” –

Jennifer Fleming, California State University

Computers and technology are part of everyday life for all of us; at Gorseybrigg we make computing an integral part of our curriculum. Our aim is to provide our pupils with the computing skills and confidence for life. We teach our pupils about: how computers and networks work; how to use computers to search for and collect information; basic computer programming. We teach the children how to stay safe and be confident when using computers and the internet and give them the skills to know what to do if they encounter inappropriate content or communication.

Pupils will learn how to control floor robots, create presentations, make films and animations, create, use and manipulate images, use coding to solve problems and create games and APPS. We embrace the skills and knowledge that our pupils have and encourage them to guide their learning in computing.
